

 **Femilift Pixel CO₂**
Multipatform Pixel CO₂ System

FAQ's:

- **What is Femilift?**
Femilift is a breakthrough technology using a CO₂ laser to deliver fractionated light and thermal energy to assist in vaginal mucosa revitalization.
- **How does it work?**
Femilift treatment is performed by inserting a probe into the vagina with a 360 degree rotation capability that delivers laser energy to tighten the vaginal mucosa.
- **Who is a good candidate?**
Women that suffer from vaginal irregularities and structural changes due to childbirth, age, or a variety of other reasons, such as painful intercourse, stress urinary incontinence, recurring UTIs, vaginal laxity and dryness.
- **How many treatments are required?**
During your consultation your provider will assess your skin to personalize a treatment plan for you. Best results are typically seen after 3 treatments, although noticeable improvements may be seen after 1 treatment.
- **How long does each treatment take?**
Femilift is an in office procedure without anesthesia or surgery. It is a fast, 10-15 minute treatment.
- **Does it hurt?**
Femilift is a virtually painless procedure. No numbing needed.
- **What is the downtime?**
This will vary depending on treatment plan recommended by your provider. You will want to avoid inserting anything into the treatment area for 24-48 hours post treatment.
